VCPI 

This one-day program is designed to provide law enforcement personnel the skills they need to conduct professional and thorough vehicle searches. Emphasis is placed on the detection of aftermarket constructed hidden compartments, as well as natural void concealment within vehicles. This type of concealment is routinely used by criminal and terrorist organizations to smuggle narcotics, weapons, illegally obtained bulk currency, explosives, and WMDs.

This training program will enhance your personnel's situational awareness when conducting vehicle searches, which greatly increases officer safety, while decreasing the likelihood of damage to vehicles during searches.

*Due to the nature of the content covered in this course,
enrollment is strictly limited to
sworn law enforcement personnel only.*

*Participants must provide credentials
upon arrival at the training site.*
