

LOT COVERAGE EXAMPLE SHEET

Lot Coverage Formula = Total sq. ft of building / Total sq. ft. of Lot
(W x L) (W x L)

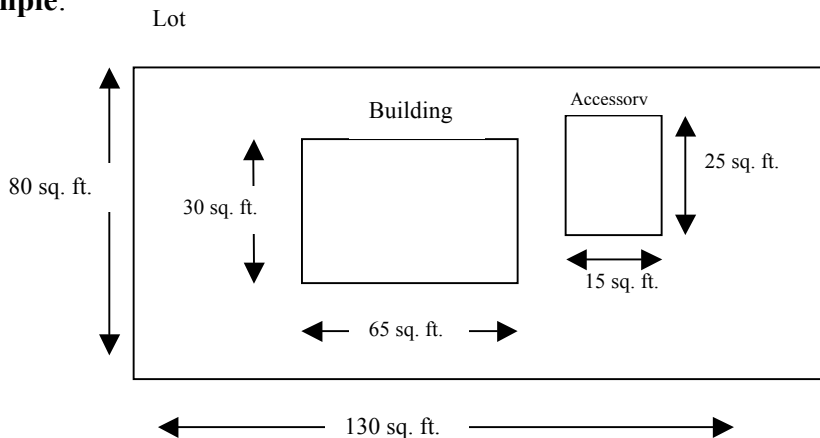

Example:

Lot = 130' x 80' = 10,400 sq. ft
Building = 65' x 30' = 1,950 sq. ft.
Lot Coverage = 1,950 / 10,400 sq. ft. = 0.1875
Lot Coverage = 18.75 %

Any additional buildings would also need to be added

Example:

Lot = 130' x 80' = 10,400 sq. ft
Building = 65' x 30' = 1,950 sq. ft.
Accessory = 25' x 15' = 375 sq. ft
Total Building Space = 1,950 + 375 = 2,325
Lot Coverage = 2,325 / 10,400 sq. ft. = 0.2236
Lot Coverage = 22.36 %
